

Customer Decile Analysis

Overview

This project analyzes customer transaction data using decile segmentation to evaluate how different customer groups contribute to total revenue and profit. Customers were ranked and divided into ten equal groups (deciles) based on their revenue contribution. This approach helps identify high-value and low-value customer segments and provides insight into the distribution of business performance across the customer base.

Methods

- Decile segmentation based on customer revenue
- Percentile calculations and ranking of customers
- Analysis of revenue and profit contribution by each decile
- Comparative evaluation of customer value distribution

Tools

- Microsoft Excel
- Spreadsheet statistical functions (PERCENTILE.INC, AVERAGE, SUM, ranking functions)

Skills Demonstrated

- Quantitative data analysis
- Spreadsheet modeling and data manipulation
- Customer segmentation and revenue distribution analysis
- Interpretation of business data and insights
